

SECURITY ALERT!

In today's security conscious environment, many government institutions and private sector entities can benefit from TEC International's Conf-Alert Pre-Set Conference Call application.

The Conf-Alert application can be incorporated into most of our standard Audio Conferencing platforms.

Conf-Alert is a procedure that responds to an "off hook" or a "trigger call" that activates outdialing to a list of phone numbers. As the callers on the list respond, they are brought together automatically in a conference call.

*3 to 48 locations may be serviced via Conf-Alert.
Call TEC International to discuss your application!*
